Earn a Graduate Certificate in Anatomy & Physiology

This online graduate certificate program, delivered from a leader in health care education, is perfect:

- For educators at the secondary or post-secondary level who require graduate-level credits to teach anatomy and physiology
- As a foundation for further education in the health professions
- For further graduate study and/or research in the discipline
- For students who want to learn in an engaging and interactive online environment, supplemented with an in-person, week-long required residency component for laboratory coursework (opportunities to view human cadaveric specimens and participate in dissection)

Graduate Certificate in Anatomy & Physiology

If you have a master's degree, this program satisfies requirements to teach courses at the high school and/or community college level. If you don't already have a master's, once you have the certificate, you can earn a Master of Education – Individualized Focus degree with four additional courses.

This program is also excellent if you're interested in pursuing a graduate degree in the health professions or a research-intensive graduate program.
